- **Gandhi Hospital, India**

11/2003 – 11/2004

As a part of my internship I had an opportunity to work in various subspecialties in both rural and urban locations. Dealing with acute medical emergencies and assisting in various procedures like endotracheal intubation, thoracocentesis, paracentesis and chest tube placement, working as a team member in certain life threatening emergencies gave me a chance to improve my clinical skills. Working in outpatient and inpatient setting gave me an opportunity to follow up with my patients and learn about their medical conditions that enhanced my clinical approach to patients.
